What We Do

JMWA® provides cost-effective management and technical solutions to support clients' architectural, engineering, logistics and planning requirements. We serve our clients by providing management and consultation to meet project and program goals. With quality as our cornerstone, our services support the development and implementation of solutions to client challenges in three core service areas:

- > **Environmental, Safety & Occupational Health Management**
- > **Facility Planning, Design and Construction Management**
- > **Logistics and Sustaining Engineering**

This three-part suite represents ever-broadening levels of expertise, which ensure that our clients receive the most advanced technical and management solutions.

JMWA provides environmental, facility and logistics engineering services throughout the Continental U.S. Since 1993, we have performed as the prime contractor or subcontractor at more than 2200 project locations worldwide.

ENVIRONMENTAL

- > Compliance
- > Planning and Conservation
- > Pollution Prevention
- > Restoration

Our environmental team is one of the most qualified and highly respected in the industry. Our broad-based experience is invaluable to clients seeking multimedia environmental consulting and management solutions.

FACILITIES

- > Planning
- > Programming
- > Design
- > Construction Management

Our facility professionals focus on maximizing solutions while optimizing facility life-cycle phases. Whether for private or governmental clients, we offer technically advanced methods to ensure maximum facility functionality.

LOGISTICS

- > Aging Weapons Systems Support
- > Sustaining Engineering
- > Supply Chain Management
- > Technical Data Support

Our logistics team has vast experience in developing innovative means for solving both logistics and engineering challenges. We are trained in executing efficient and cost-effective solutions for repairing aging weapon systems and for managing inventory transport and set-up to ensure operational readiness.
