J. M. Waller Associates, Inc. (JMWA®) provides logistics and sustaining engineering consultation services to clients in both government and commercial arenas. Since 1993, our firm has performed as prime contractor and subcontractor in both government and commercial contracting sectors at more than 2200 locations worldwide.

What role does *cost* play in your project strategy?

Cost equals loss of time, money and quality. Our vision extends beyond short-term remedies to long-term, high-quality, cost-effective solutions. Done right, on time and on budget.

JMWA understands your concerns and goes to great lengths to provide each client with individualized strategies based on best practices and thoughtful budget considerations.

Reflecting the JMWA corporate core values, our goal is to earn long-term, trusting relationships with our customers.

To earn those relationships, we place our clients' needs first, utilizing to full benefit our specialized expertise and experience in combination with the established bank of resources within the industry to ensure the greatest success on all counts.

MANAGING THE VISION® FOR YOUR COMPANY'S SUCCESS

Using highly specialized tools and methods for analyzing failure trends, we assist in eliminating failures in aging systems before they occur.

Our professional logistics services include the following solutions:

Supply Chain Management

Supply chain management support; item management; forecasting; bill of material support; warehousing and inventory support; maintenance planning; supply support; packaging, handling, storage and transportation; development of cost-effective systems and approaches for meeting logistics readiness requirements

Sustaining Engineering Design & Support

Sustainment and improvement/modification; development of cost-effective systems and approaches for meeting readiness requirements; reverse engineering, robust process reengineering and best practice analysis for remanufacturing; depot-level maintenance repair and overhaul; operations design; prototype development and testing for aging systems; development of innovative repair and overhaul processes and procedures

Diminishing Manufacturing Sources Solutions

Obsolescence and sustaining engineering solutions associated with aging weapon systems; design solutions for enhancing producibility; accelerated product introduction resulting in increased quality and reduced overall cost; vendor identification and qualification services resulting in multiple sources of supply where applicable

Technical Data Solutions

Creation and delivery of nonproprietary technical data; updating, maintaining and modernizing existing data; developing technical data packages sufficient for competitive re-procurement; Technical Order (TO) and Time Compliance Technical Order (TCTO) maintenance and updates; Interactive Electronic Technical Manual (IETM) support; validation and verification of technical data

Going a Step Beyond

Today's systems are being utilized much longer than originally anticipated. Anticipating readiness impactors and using state-of-the-art technologies, we have adopted a cost-effective, team-based, "pre-emptive maintenance" solutions approach to prevent failures before they occur and ensure mission readiness.

We understand that existing systems rely on professional supply chain management and planning support. However, obsolescence of parts and diminishing supply chains threaten mission readiness requirements and bring about new challenges to sustaining engineering and logistics strategies.

Our professionals realize the value of innovative solutions for developing cost-saving repair plans, overhaul procedures, designing new parts and qualifying new sources of supply. Our goal is to assist our clients in increasing weapon systems availability while providing efficient processes and procedures while being sensitive to cost issues.

Awards of Recognition

- » 2010 District of Columbia Small Business Person of the Year Award
- » 2009 Air Force Design Merit Award for Lackland AFB, TX, Recruit Housing and Training Master Plan
- » 2009 SAME Industry Award to a Small Business in support of DoD programs
- » 2009 AEGIS Award Recipient
- » 2008 Department of Veterans Affairs Enterprising Veteran of the Year Award
- » 2007 Department of Defense Service Disabled Veteran Owned Small Business Achievement Award
- » 2007 Science Applications International Company (SAIC) Small Business of the Year Award
