ASSOCIATES, INC.

MANAGING THE VISION® | ENVIRONMENTAL | FACILITIES | LOGISTICS

A Multiple Award Winning Service Disabled Veteran Owned Business

FIXED LADDER SAFETY

J. M. Waller Associates, Inc. (JMWA®) provides professional consultation and technical solutions to support Environmental, Facilities and Logistics programs and projects. Our firm is highly respected for its ability to provide top-quality, customer-centered safety and compliance consultation/management services while working within time frame and budget.

Working on ladders can be hazardous and a major source of injuries and fatalities. Many of the injuries are potentially serious enough to require time off the job, putting you behind schedule and budget. We take great pride in utilizing this expertise when assisting in the design of customized fall arrest safety system solutions that ensure fixed-ladder safety.

JMWA provides comprehensive fixed-ladder fall safety services for any work environment including:

- » Identification and analysis of compliance needs
- » Site-specific safety issue consultation
- » Corrosion control analysis
- » Fall protection systems maintenance
- » Vendor identification and parts ordering
- » Assistance in obtaining permits for installation approval
- » Installation coordination and management
- » Production of safety reports and checklists
- » GIS mapping
- » Site photography
- » Tower and antennae maintenance
- » Emergency response
- » Specialized use and maintenance training

An individual project manager will oversee all aspects of your project including consultation, analysis, ordering, installation and training. Clients receive customized equipment usage, training, documentation and equipment warranty information for their reference files.

We facilitate day-to-day site management as well as emergency tower and antenna repair capabilities. Corrections made will be fully documented, managed and completed to restore your systems to full operation.

Our staff is able to supply hard copy and high-quality digital files of photos, forms, geographical maps, aerials and onsite findings which can be utilized for safety programs. This information may be stored for desktop reference and integrated into applications designed specifically for GIS data management.

For more information about JMWA's Fixed Ladder Safety services, or any of our other Environmental, Facilities or Logistics lines of business, visit us at www.jmwaller.com or contact one of our offices below.
